ACKNOWLEDGMENTS

This research has been supported by United Nations Environment Programme. The authors are grateful to Mr. Wenyi Wang, Mr. Bin He, and Ms. Z. Li for their help and support, which contributed to the successful completion of this report.

Thanks are also due to Yunnan Environmental Protection Bureau, Dali Environmental Protection Bureau, Yunnan Provincial Research Institute of Environmental Science, and Dali Research Institute of Environmental Science for providing assistances during this preliminary study.

CONTENTS

1. INTRODUCTION	1
1.1. Background	1
1.2. Main Points of UNEP's Demand	2
1.3. Statement of Problems	4
1.4. Literature Review	5
1.5. Rationales	8
1.6. Objectives	9
1.7. Organization of this Report	9
2. OVERVIEW OF THE STUDY SYSTEM	10
2.1. The Study Area	10
2.2. Major Environmental Problems	12
2.3. Existing Environmental Management Options	12
(1) Water Quality Protection	13
(2) Nature Protection	13
(3) Water and Soil Conservation	13
(4) Water and Land Resources Development	13
2.4. Statement of Problems	14
3. SYSTEM DESCRIPTION AND ANALYSIS	14
3.1. Scopes	14
3.2. Complexity of the Study System	15
3.2.1. Interactive Relationships between Different System Components	15
(1) Agriculture Subsystem	15
(2) Industrial Activities	17
(3) In-Lake Net-Box Fishery Production	19
(4) Tourism	19
(5) Forest	22

(6) Stone Excavation	24
(7) In-Lake Navigation	24
(8) In-Lake Fishing	24
(9) Limekiln/Brickkiln	28
(10) Water Uses	28
(11) Interactive Relationships between Environmental, Resources and Economic Objectives	31
(12) Interactive Relationships between Different System Activities	31
(13) Relationships between System Activities and Related Pollution Problems	34
3.2.2. Dynamic Feature of the Study System	34
3.2.3. Multiobjective Feature of the Study System	36
3.2.4. Uncertain Feature of the Study System	36
3.2.5. Summary	36
3.3. Systems Analysis Methods	37
3.3.1. Inexact Multiobjective Optimization Approach	37
(1) Definitions	37
(2) IMOP Models	39
(3) Characteristics of the IMOP	41
(4) Solution Method	44
3.3.2. Systems Dynamics Approach	44
3.3.3. Environmental Supporting Capacity Analysis	44
3.3.4. Other Methods	46
4. EXPECTED RESULTS	47
4.1. Generation of Decision Alternatives	47
4.2. Results Interpretation and Validation	48
4.3. Presentation of Results	48
4.4. Reflection of Dynamic System Features	48
4.5. Tradeoff Analysis	49

4.6. Implementation of the Planning Schemes	49
4.7. Training of Highly Skilled Personnel	50
5. CONCLUDING REMARKS	51
REFERENCES	52
APPENDIX: METHOD OF SOLUTION	61
